

Freestanding Collection

BEKO

2012/2

Refrigerators | Dishwashers | Ovens | Washing Machines | Tumble Dryers

Welcome to the world of Beko freestanding appliances, where functionality and efficiency blend in full harmony.

A wide product range in which you can find a perfect match to make the best use of space in your home.

A range of innovative appliances bring you the smartest solutions to all your cooling, washing and cooking needs.

A collection designed to **improve your everyday life.**

Smart Solutions

New Technology

Greener

Beko **provides smart solutions** to improve your everyday life.

Beko Smart Solutions are built on **functional designs, efficiency and technology**. Truly inspired by consumer insights Beko develops its smart solutions to exceed expectations.

We use our research and development capabilities and know how to bring efficiency and functionality into people's everyday lives. Through our ongoing research and development, Beko is able to make the latest product innovations **that everybody wants** to use.

Beko is highly **committed to reducing the impact** of its products and production processes to environment.

Here, **green-thinking starts by designing** the product to be the most **energy efficient** and the most **recyclable**. Then these designs are converted to products according to production processes that support our determination to reduce our carbon footprint and environmental impact.

Kitchen Solutions

- Refrigerators 6
- Dishwashers 92
- Cookers 114

Laundry Solutions

- Washing Machines 158
- Tumble Dryers 196

Refrigerators

From state-of-art large capacity side by side refrigerators to a simple under the counter fridge freezer, Beko refrigeration range has been developed to combine modern design with the latest technology. As we strive to facilitate your life and add an elegant touch to the mostly favored part of your home, the new collection offers great features as well as smart storage and cooling solutions. With a vast spectrum of models, sizes and colors to suit any kitchen style, you will be sure to find the perfect appliance from Beko.

Designed to suit any kitchen style with large choice of colours

Beko refrigerators and freezers combine **functional** inner space with their **stunning** outlook. These products stand out with their **elegant design** while exceeding their standard function of “preserving food” and offering multiple **cooling solutions** to improve your **everyday life**.

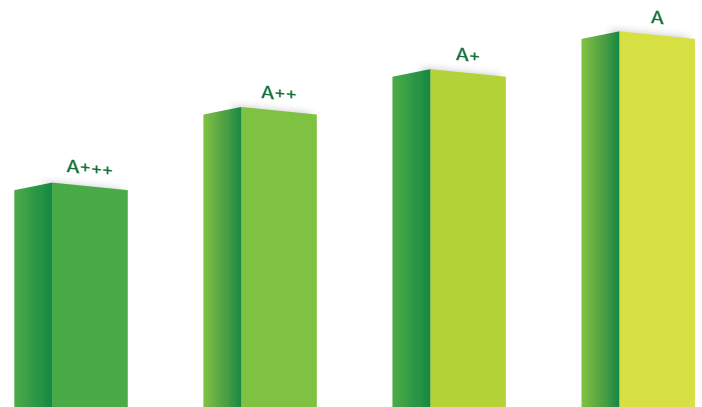

Be a part of a green future!

A+++ Energy Efficiency

The need to save energy and resources has never been more important than now. Beko with its environmental vision provides products with A+++ and A++ energy ratings. An A+++ refrigerator consumes up to 60% less energy than an identical A product. Similarly, an A++ product consumes up to 40% less energy than an identical A product.

Keep the original nutritional value of your meat and fish.

Shock Freeze Compartment

We all care serving tasty and healthy food with high nutritional value to our beloved ones. Fresh fish and meat lose their nutritional value if they are not rapidly frozen.

Smart Beko refrigerators have Shock Freeze compartments where foods are frozen rapidly thus ensuring that their cell structures don't deteriorate and their nutritional value and flavors remain intact.

Cooler or freezer with one touch of your finger!

Multi-Zone Compartment

Do you have a big family? You may change the storage conditions of your refrigerator according to the amount of food and your local favorites.

Beko enables you to maximize your storage capacity according to different needs at different times. By just pressing the button of the electronic touch control digital display, the bottom right 77 liters compartment can be used as either a fridge or a freezer. (Temperature range: -24/+10 °C)

The bracing energy of blue light is in your crisper.

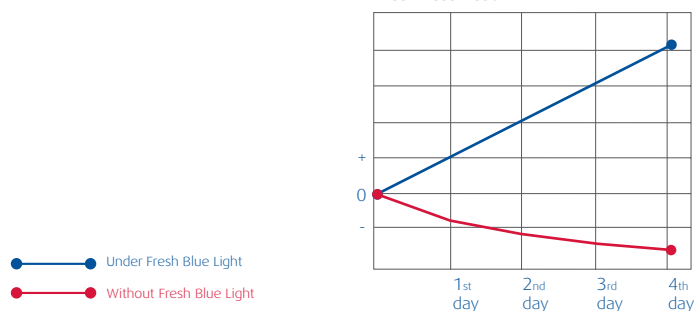

Active Fresh Blue Light

Fresh fruits and vegetables maintain their vitality for a while after harvest.

Thanks to Beko active fresh blue light technology the process of photosynthesis continues in the fridge which prolongs the storage life of fresh fruit and vegetables while maintaining their natural flavours and nutritional elements.

Freshness Test

Eat fresh eat healthy with Beko Smart Refrigerators

Active Dual Cooling System

Thanks to Beko's active dual cooling technology fridge and freezer compartments have independent cooling systems to provide the optimum level of humidity to prolong the storage life of fresh fruit and vegetables while preventing odour transfer. Due to the independent cooling system of each compartment the air circulating into the fridge stays in the optimum level. This prevents the foods and the vegetables in the cooling compartment from freezing.

The main benefits brought to you by this new system are as follows:

• Food keeps fresher for longer

When food loses more than 20% of its moisture it is no longer considered 'fresh' and can be unpleasant and risky to consume. In standard refrigerators, one air flow circulates both in the fridge and freezer compartments. When the air comes into contact with the cooling system (the evaporator) in the freezer compartment, it loses its humidity. This dry air then circulates through the fridge compartment where it takes moisture from the stored food, causing it to become dry. Thanks to Beko's new Active Dual Cooling technology, fridge and freezer compartments have separate air flow to ensure that the food in each compartment is stored in optimum conditions and the food remains fresher for longer duration.

• No more mixing of odours

One of the most common problems of frost-free refrigerators is the mixing of odours between fridge and freezer compartments. This happens when the same cooling air flow circulates through both fridge and freezer sections. Beko Active Dual Cooling technology provides each compartment with a separate air flow, therefore the possibility of unpleasant mixing of odour is eliminated.

• No more frozen food in the fridge

In conventional frost-free systems, the air blown into the fridge compartment is around $-18\text{ }^{\circ}\text{C}$, which can freeze food located near the air inlet openings. With the new Beko system, the air blown into in the fridge compartment is around $1/+1\text{ }^{\circ}\text{C}$, which is perfect for maintaining the ideal temperature of approximately $3\text{ }^{\circ}\text{C}$ in the fridge compartment.

• More stable temperature gives extended storage

Even when the fridge does not require cool air, the energy efficient circulation fan continues to run ensuring fresh food to be stored in a more stable temperature. With less fluctuation in temperature, stored food remains fresher for a longer period of time.

ACTIVE DUAL COOLING

TRADITIONAL COOLING

ACTIVE DUAL COOLING

TRADITIONAL COOLING

Eat fresh eat healthy with Beko Smart Refrigerators

Technology for Cooling

Active Ioniser

The Active Ioniser neutralises bacteria, viruses and particles that cause effluvia in the refrigerator, thus creating an antibacterial effect. The circulated air inside the refrigerator is kept clean as a result, and food can be stored for a longer period.

Active Odour Filter

This filters the circulated cool air inside the refrigerator and eliminates unwanted odours and bacteria to help keep the food inside fresh.

Active Seal Guard

Door seals are usually hard to clean and provide a suitable environment for the accumulation of bacteria. By means of the antibacterial additive in the door seals, such areas remain hygienic, and that the seal serves as an overall antibacterial shield for the refrigerator.

Anti-Bacterial Door Handles

With the help of a special anti-bacterial seal coated on the door handles, the most important contact points remains bacteria-free.

Smart Solutions for Cooling & Freezing

Technology for Cooling

Touch Control Electronic Display

The increasing use of touch control electronic displays through the product range not only makes them look sleeker but also allows easy access to the refrigerator controls.

Digital Controls

Easy-to-use electronic controls and a digital set temperature display ensures optimum control of your appliance.

Frost-Free System

Intended to eliminate the formation of ice on food and within the interior of the appliance, the Frost-Free System ensures that no defrosting is necessary. This system not only makes the refrigerator hassle-free and easy to use, but also maintains the right temperature for more effective food preservation in the fridge.

Cooling Fan

Thanks to the fan in the fridge section of selected Beko fridge freezers, cold air will be circulated in the fridge more evenly, thus ensuring a better cooling performance.

Eco-Fuzzy Function

When the refrigerator doors are not opened for 6 consecutive hours and the setting are not altered, Eco-Fuzzy Function puts the refrigerator in energy-saving mode, decreasing the electricity consumption and causing less hazardous effect on the environment.

Vacation Mode

Brings you extra energy saving option. Holiday mood allows you to operate only the freezer while you are away from home.

Smart Design for Ease of Use

Self Closing Doors

Thanks to the unique hinge design, doors are automatically closed if left ajar at up to a 15° position.

Dual Action Doors

Doors stay open at a 120° position, the ideal angle for convenient and easy access, whilst also protecting furniture and the appliance doors. A wider position (150° opening) is also possible if desired.

Door Open Buzzer

Beko side-by-side refrigerators have both visual and audible buzzers that get activated if a door is left wide open. In the electronic frost-free models, there is an audible warning.

Sliding Crispers and Drawers

Regardless of the amount of the load, the freezer compartment drawers and crispers can be easily moved by sliding thanks to their roller mechanisms.

Stored Water Dispenser

Thanks to the stored Water Dispenser on selected models, chilled water can be obtained from the integrated Water Dispenser without opening the door. The water reservoir placed inside the door can be easily filled and removed for cleaning. The Water Dispenser is large enough to accommodate tall glasses. Light-touch dispensing paddles push back easily, providing easy access to water.

Tall Dispenser

The Water and Ice Dispenser automatically dispenses filtered chilled water, ice cubes, or crushed ice on tap. The dispenser is large enough to accommodate tall glasses. White LEDs used for illuminating the water and ice dispenser give an aesthetically pleasing appearance.

Self Closing Doors

Twist and Serve Ice Cube Tray

Sliding Crispers and Drawers

Tall Dispenser

New Generation Water Filter

Concealed in the refrigerator body, the water filter strains harmful substances such as chlorine, lead, etc. along with undesired flavors, thus converting the water to drinkable standards. A warning on the digital display indicates when it's time to replace the filter.

XL Freezer Compartment

Extra-large space can be created in the freezer compartment by means of the removable shelf and flaps that can open upwards and downwards. Thus, an appropriate compartment is provided for a particularly large item of food, such as a turkey or large pizza boxes.

Twist & Serve Ice Cube Tray

The ice-cube tray provides easy access to the ice cubes. With a simple twist, ice cubes easily drop into the tray.

Sliding and Spill Proof Glass Shelves

All glass-body shelves in the fridge slide forward for convenient use, meaning that difficult-to-reach items can be accessed easier. Dripping of any spilled liquid onto the lower shelves is prevented thanks to the full plastic trim surrounds that frame all four sides of the toughened safety glass shelves.

Easy Opening Handle

The vacuum effect frequently seen in bigger capacity models is overcome by the "easy handle". This handle - available on big capacity larder and upright freezer models - provides easy opening without extra effort.

XL freezer compartment

Easy opening handle

Stored Water Dispenser

Spill Proof Glass Shelves

Smart Design for Functionality

Glass Shelves

Glass Shelves

Made of tempered safety glass, glass shelves are:

- Versatile enough to permit the maximum usage of the available space.
- Strong, durable and adjustable.
- Spill-proof and extremely easy to clean.

The shelves can be removed even when the door-opening angle is only 90°, facilitating adjustment in very limited spaces.

LED Illumination

Compared to conventional illumination designs, chains of LED lights along the back wall of the fridge compartment provide more efficient and cleaner lighting of the compartment.

LED Illumination

Icebank

Icebank

Incorporated in the freezer sections of combi and freezer models, the icebank provides useful space for making and storing ice cubes and freezing small fruits.

Rotating Crisper with Sliding Tray

The rotating crisper grants easy access to food stored in the crisper, even when the space is very limited and the door of the refrigerator cannot be fully opened. The sliding tray provides a secure storage space for delicate items such as parsley, strawberries, etc.

The “Big” Compartment

The “big” compartment in the upright freezer provides you with larger space to keep bigger items. It has around 30% more space than a standard compartment.

Rotating Crisper with Sliding Tray

Rotating Box

Rotating Box

Thanks to its cleverly designed mechanism, this storage container helps to utilise the unused space under the door rack in an efficient way. Rotating Box is ideal for storing small items which may get lost in the main compartment; you can locate them easily in the Rotating Store.

Water & Ice Dispenser

When the number of ice cubes falls below a given level, water is diverted from the network into the ice cube tray, ensuring you always have a supply of ice cubes when you want them.

Water & Ice Dispenser

The Big Compartment

Dairy Compartment

Thanks to its transparent cover, the upper door shelf provides ideal space for preserving dairy products and keeping them from drying.

Dairy Compartment

Smart Design for Functionality

Fresh Store

Fresh Store

Stores fresh meat, fish, ready cooked and chilled food at around 0 °C safer and longer storage.

Bottle Holder

The bottle holder hung by the side of the glass shelves is a functional solution that's designed to make use of the unused space between two shelves.

Mini Bar

Even 2.5 liter bottles can be reached without having to open the door thanks to the mini bar lid and extra room on the fridge compartment door. Drinks can also be served on the opened mini bar lid.

Mini Bar

Chrome Bottle Rack

Chrome Bottle Rack

The chrome bottle rack placed inside the cabinet provides ideal space for storing bottles while maximizing the utilisation of the available space in the refrigerator.

Soft-Touch Opening

With smooth, soft-touch opening, the minibar can be accessed without opening the main fridge door, making drinks easily accessible.

VarioStore™

Storing efficiently! Without taking up any more space, VarioStore™ enables you to increase your storage of fresh food and drinks during the summer, then change to greater capacity for frozen food in the winter. It's all done at the press of a button and in less than an hour the temperature changes from -24 °C to +4 °C.

VarioStore™

Active Dual Cooling System

Beko smart refrigerators help maintain optimum humidity in the fridge and freezer compartments for best cooling and freezing performance. Thanks to Beko's active dual cooling technology fridge and freezer compartments have independent cooling systems to provide the optimum level of humidity to prolong the storage life of fresh fruit and vegetables while preventing odour transfer. Due to the independent cooling system of each compartment the air circulating into the fridge stays in the optimum level. This prevents the foods and the vegetables in the cooling compartment from freezing.

Multi-Zone Compartment

Beko enables you to maximize your storage capacity according to different needs at different times. By just pressing the button of the electronic touch control digital display, the bottom right 77 liters compartment can be used as either a fridge or a freezer. (temperature range: -24/+10 °C)

Active Fresh Blue Light

Thanks to Beko active fresh blue light technology the process of photosynthesis continues in the fridge which prolongs the storage life of fresh fruit and vegetables while maintaining their natural flavours and nutritional elements.

Shock Freeze Compartment

Foods are frozen rapidly in the Shock Freeze compartment, thus ensuring that their cell structures don't deteriorate and that their nutritional value and flavors remain intact.

Energy Efficiency

Beko with its environmental vision provides Beko 4 door refrigerator with A+ energy performance.

Active Ioniser

The Active Ioniser neutralises bacteria, viruses and particles that cause effluvia in the refrigerator, thus creating an antibacterial effect. The circulated air inside the refrigerator is kept clean as a result, and food can be stored for a longer period.

Active Odour Filter

This filters the circulated cool air inside the refrigerator and eliminates unwanted odours and bacteria to help keep the food inside fresh.

Active Seal Guard

Door seals are usually hard to clean and provide a suitable environment for the accumulation of bacteria. By means of the antibacterial additive in the door seals, such areas remain hygienic, and that the seal serves as an overall antibacterial shield for the refrigerator.

FreshStore

Stores fresh meat, fish, ready cooked and chilled food at around 0 °C safer and longer storage.

Frost Free System

Intended to eliminate the formation of ice on food and within the interior of the appliance, the Frost-Free System ensures that no defrosting is necessary. This system not only makes the refrigerator hassle-free and easy to use, but also maintains the right temperature for more effective food preservation in the fridge.

Cooling Fan

Thanks to the fan in the fridge section of selected Beko fridge freezers, cold air will be circulated in the fridge more evenly, thus ensuring a better cooling performance.

Dishwashers

The Beko dishwasher range is designed to enhance the beauty of a kitchen and to bring comfort and convenience into the lives of the consumers through smart solutions.

Save more, consume less!

A+++ Energy Efficiency

The need to save energy and resources has never been more important than now. Beko with its environmental vision provides A+++ -10% energy efficient dishwashers.

These dishwashers are equipped with Effective Drying System. Patented "Effective Drying" System helps to achieve maximum energy efficiency while increasing drying performance.

Save water, save the world!

6 liters of Water Consumption

Beko smart dishwashers empower the water droplets increasing the effectiveness of water spray. Together with the Double Filtering System cleaning and storing the final cycle water, Beko dishwashers consume a record-breaking amount: 6 L water per wash.

AluTech is a unique aluminum isolation that keeps the heat inside while the water is being used in the final cycle. With "Double Filtering System", water is cleaned and stored in a concealed tank which warms up while the machine is running. Less energy consumption coupled with maximum efficiency and higher satisfaction.

Steam power for shiny dishes!

SteamGloss™

Beko SteamGloss™ Dishwasher enables you to dry your dishes without losing their brightness. Your glasses will shine 30%* more with the help of steam technology. Let your dishes sparkle with the gentle steam touch and enjoy spotless, shiny dishes.

LGA test result proves stainless and spot free glossy drying, 30% better results for glassware, and 43% improvement in the brightness of china has been recorded.

* Comparison between SteamGloss™ mode on/off

Quiet as a Library!

Silent Tech

Beko smart dishwashers operate in silence. Enjoy gentle conversations with your friends next to your ultra quiet dishwasher. Beko ultra quiet dishwasher operates at 39 dBA sound level, which you may hardly find in a library.

Vacuum cleaner, distance 1m	: 70 dBA
Conversational speech, 1m	: 60 dBA
Average home	: 50 dBA
Quiet library	: 40 dBA

www.sengpielaudio.com/TableOfSoundPressureLevels.htm

Smart Features of Dishwashers

BekoOne Smart Dishwasher

The BekoOne smart dishwasher senses dirtiness, amount of the dishes loaded and the hardness level of the water. In addition, you do not have to think about the program selection anymore since it chooses the most convenient washing program parallel to your needs. BekoOne handle the rest for you and will always provide you perfectly clean dishes along with minimum water and energy consumption. All these and more are possible with a single touch of your finger.

"A++" Performance

BekoOne features "A++" energy, "A" cleaning and "A" drying performance, achieving the best cleaning and drying results while using minimum energy. At the end of the washing cycle, BekoOne will display total energy and water consumption figures.

Active Wash Technology

BekoOne uses Active Wash Technology to provide efficient and gentle washing. This technology adjusts water pressures to the lower and upper baskets. Heavily soiled dishes in the lower basket are subjected to higher water pressure while lightly soiled delicate items such as glassware are kept under lower pressure. The innovative brushless DC motor allows the use of active wash technology.

Quiet Operation

The BekoOne extra silent 44 dBA noise level turns your kitchen into a peaceful realm.

WaterSafe+

BekoOne comes with a double security system to prevent water leakage. Besides the main water safety system that shuts off the water inlet, WaterSafe+ provides extra safety by automatically shutting off the water supply if the water inlet hose begins to leak. Your home will thus be protected against any possible leaks.

Smart Technology with Sensors

Smart sensors provide BekoOne with the ability to analyze the situation and decide on the best washing program to apply. Based on the information received from smart sensors BekoOne goes through an analyzing process to find the best washing program to apply. 11 separate sensors inside the machine contribute to the BekoOne smart System where 3 unique sensors operate as the leading elements in creating this smart and cutting-edge technology.

Dirt Sensor

Decides how dirty the dishes are and chooses the most appropriate washing program.

Load Sensor

Senses the amount of dishes loaded in the machine and decides the necessary amount of water.

Water Hardness Sensor

Determines the water hardness level and adjusts it for an effective and gentle wash. Upon completion of the analysis of the smart sensors, BekoOne will choose the most convenient one among the 5 different program options, based on the degree of dirtiness and the amount of the dishes.

Effective Drying System (EDS)

Patented "Effective Drying" System (EDS) helps to achieve A+++ energy efficiency while maximizing drying performance. By the help of this special system, humidity level of the air circulating inside the dishwasher decreases during the drying cycle. Also, system provides effective drying performance under lower rinsing temperature and allows you to place your dry dishes into your cupboard without burning your hands.

Active Fan Drying

The Active Fan Drying System uses a fan to increase air circulation in the dishwasher to reach perfect drying results and to provide normal temperatures for your dishes when the program is finished.

Tablet Detergent Button

Tablet detergents are compact and easy to use, but occasionally, they may have some drawbacks like unsatisfactory drying results or undissolved tablet residues left in the machine. As a solution, Beko dishwashers are equipped with a tablet detergent button to eliminate such drawbacks and assure maximum performance when tablet detergents are used.

XL Capacity

XL Capacity provides more space for bigger families or for the ones who would go for banquets. These 15 place setting dishwashers wash 25% more compared to the standard 12 place settings. Such increased washing capacity offers substantial benefits.

Reducing the number of wash cycles means:

- Saving 25% on detergent*
- Prolonged product lifetime – up to 2 years**
- Saving 15% on water and energy consumption***

Flexible Half Load

There's no need to wait for both racks to be fully loaded. The Flexible Half Load option allows you to load either the upper, the lower, or both racks together as required for easy and economical washing.

Self Cleaning Filter

Selected Beko dishwashers come with an automatic self cleaning filter which eliminates the need for manual cleaning, improving the cleaning efficiency and making your dishwasher easier to maintain in tip top condition.

Fingerprint-Free Stainless Steel

Thanks to a special coating on the stainless steel surfaces of selected models, finger prints are avoided. The appliance always looks spotless, clean and shiny.

* If standard tablet detergents are used

** Lifetime simulation tests of dishwashers are based on 280 cycles / year.

*** When consumptions per setting are compared between standard and XL capacity models.

Smart Solutions for Dishes

Programs

Quick & Clean Program

Quick & Clean, a unique program from Beko, guarantees exceptional A class washing performance, not only for lightly soiled items, but for normally soiled pots and dishes as well. This A class wash cycle cleans your dishes in just 58 minutes, which is absolutely much quicker than washing by hand.

Xpress 20'

The Xpress 20', another unique program from Beko, washes a half load in only 20 minutes.

Mini 30' Program

Perfect for lightly soiled dishes and glasses, the mini 30' program washes a full load in 30 minutes at 35 °C, thus saving time and energy.

Eco 50 °C Program

Ideal washing cycle for normally soiled dishes to save energy.

Auto Program

Thanks to the Auto Program, the soil level of the dishes is detected by sensors, which then automatically determines the appropriate wash cycle for the case at hand, thus relieving you of the task of selecting the program yourself. The dishes are washed using the minimum required amount of energy and water, thereby ensuring that the program remains both practical and economical.

BabyProtect Line

BabyProtect Program

Assures that your children's eating utensils are sparkling clean and germ-free. Beko combines an intensive wash cycle with an extra hot rinse cycle in order to provide total hygiene for your baby's utensils, plates and baby bottles. The BabyProtect program is certified by LGA for providing 99.99% hygiene.

Baby Bottle Holder

The Baby Bottle Holder accessory adjusted in the lower basket is a design solution that guarantees convenient, efficient and safe cleaning of your baby's bottles.

Antibacterial Seal

Due to the dirt accumulation over time, bacteria reproduction may occur on the gasket of the dishwashers. The Antibacterial Seal on Beko dishwashers act as a barrier to block this formation.

Time Management & Safety

LCD Display

The LCD display on Beko dishwashers allow you to control and manage various functions on a single compact display. It offers Time Delay up to 24 hours, a program follower that enables you to see the duration of the selected program, and displays several warning indicators such as the salt and rinse aid. You can also select half load and extra drying options. LCD display not only make your little helper look attractive but also present a precise time-management with user-friendly interpretations.

Time Delay

The wash cycle can be delayed for three, six, or nine hours (up to 24 hours on digital models) enabling you to plan your wash time more flexibly while taking advantage of reduced electricity rates.

Program Follower

Program stages are displayed with LED indicators or icons giving you the possibility to keep track of the selected program.

Express (Fast) Option

Express option cares your valuable time. The brushless DC motor technology introduces express option, which shortens wash durations. The dishwasher increases the washing temperature, reduces water consumption and adjusts water pressures for shorter wash duration up to 50%.

Child Lock

The child lock option can be activated to prevent children from tampering with the buttons. Activating the child lock option prevents any change from being made to the selected program.

WaterSafe

In case of overflow, the WaterSafe system of Beko dishwashers cut off the water flowing into the machine.

Smart Solutions for Dishes

Ease of Use & Flexibility

Multipurpose Removable Cutlery Drawer

A great new option available on selected models is the third pull out basket. A convenient way to wash cutlery, small items and espresso cups or it can be filled with other utensils by removing the multipurpose third basket.

The Acrobat System

Thanks to the Acrobat System, the height of the upper basket can be easily adjusted even when the basket is full, providing extra space for larger dishes and pans.

Spacious Interior

Loading pizza plates and long glasses is no longer a problem. The height of the upper basket can be adjusted to accommodate the items of up to 31 cm in the lower basket.

Sideway Sliding Cutlery Basket

Beko's new cutlery basket slides right or left sideways in the lower dishwasher basket. Improved flexibility enables easy cutlery loading and the cutlery basket is removable to allow loading of plates properly in its place, increasing the lower basket capacity.

Easy Fold Plate Supports

Plate supports can be easily folded away to create space to accommodate large-sized pans and pots.

Height Adjustable Shelves for Mugs

Height-adjustable shelves for mugs offer maximum use of the available space. Tall mugs and small cups can be placed on top of the shelves, or alternatively, the upper part can be used for long utensils.

DFN 6840

60 cm Electronic Dishwasher

SteamGloss™

Beko SteamGloss™ Dishwasher enables you to dry your dishes without losing their brightness. Your glasses will shine 30% more with the help of steam technology. Let your dishes sparkle with the gentle steam touch and enjoy spotless, shiny dishes.

Energy Efficiency

Thinking of your dishes and the world, the Beko DFN 6840 dishwasher has A+ energy performance.

Quick & Clean Program

Quick & Clean, a unique program from Beko, guarantees exceptional A class washing performance, not only for lightly soiled items, but for normally soiled pots and dishes as well. This A class wash cycle cleans your dishes in just 58 minutes, which is absolutely much quicker than washing by hand.

Active Fan Drying

The Active Fan Drying System uses a fan to increase air circulation in the dishwasher to reach perfect drying results, and to provide normal temperatures for your dishes when the program is finished. So that you can put your dry dishes into the cupboard immediately without burning your hands.

Tablet Detergent Button

Tablet detergents are compact and easy to use, but occasionally, they may have some drawbacks like unsatisfactory drying results or undissolved tablet residues left in the machine. As a solution, Beko dishwashers are equipped with a tablet detergent button to eliminate such drawbacks and assure maximum performance when tablet detergents are used.

Steam power for 30% more shiny glasses!

DFN 71046 X 30 60 cm Electronic Dishwasher

Energy Efficiency

Beko enhances its green credentials by producing one of the most energy saving dishwashers in the market; it consumes 10% less energy than A+++ energy class level. Beko dishwashers with "A+++ -10%" energy, "A" cleaning and "A" drying performance achieve the utmost cleaning and drying results while consuming minimum energy.

In addition to the minimum energy consumption, Beko dishwasher consumes as less water as a cactus needs. DFN 71046 X30 cleans 13 place settings only with 10 Lt. water consumption.

Cookers

Cooking appliances are the heart of the kitchen. The new range of Beko ovens are designed to become the heart of your home, offering you everything you need to turn an ordinary meal into a splendid feast.

Be a part of a green future!

Energy Efficiency A-40%

The need to save energy and resources has never been more important than now. Highly aware of the natural issues, Beko offers products ranging from A energy consumption to A-40% energy consumption. Fan heating application makes it possible for multi-functional Beko ovens to save up to 40% energy than the standards outlined by "A" energy efficiency class.

Clean with a single wipe!

Practiclean Full Glass Inner Door

Every Beko freestanding cooker is equipped with this Practiclean Full Glass Inner Door. Constructed with a full glass panel, the interior of the door is free of bolts, making it easy to clean with a single wipe.

More time for pleasure with self cleaning cycle!

Pyrolytic Self Cleaning

Removing greasy stains that accumulate in the oven over time has always been a dreadful chore. Beko pyrolytic ovens save you from the trouble of scrubbing those hard-to-reach surfaces.

The 120-minute pyrolytic self-cleaning cycle burns stubborn stains to fine ash as your oven heats itself to 500 °C.

The ash can then be simply wiped away with a piece of cloth, without the need of any detergents or chemicals. For less dirty ovens, it is also possible to choose a shorter 90-minute eco-pyrolytic cycle which saves 25% on energy consumption.

Enjoy your meal with your full family!

Extra Large Capacity

When it comes to capacity, bigger is definitely better. Despite its standard dimensions, the 67,5 liter* Beko oven has among the most spacious interiors among in its class. The extra large interior provides enough room to roast a big turkey, or prepare a big feast for family and friends. It's convenient for large families, or anybody who wants to get the most out of a Standard 60 cm width freestanding cooker.

* For conventional cookers.

Smart Solutions for Electric Cookers & Gas Ovens

Electric&Gas Cookers

3D Cooking

Provide delicious dishes without keeping your guests waiting. Beko's advanced cooking system allows you to cook three different dishes at the same time without any odour mixing problems. Each tray has its own supply of hot air which is then drawn to the back wall where the odour particles are isolated. This system enables you to cook homogeneously with maximum efficiency, saving time and energy.

Conventional Cooking

Both upper and lower heaters operate simultaneously. Ideal for cookies, all types of pastry, or any food that needs a crispy top.

Grilling

Ideal for grilling steaks, sausages, toast or fish.

Fan Cooking

The circular heater and fan allow different kinds of food to be cooked simultaneously while preventing their unique smell or flavours mixing with each other. Maximum three different recipes that require the same or similar temperature settings can be cooked at the same time.

Upper Heater+Fan

The upper heater and fan operate simultaneously, ensuring even heat distribution. Ideal when additional cooking on the surface of the dish is required.

Defrosting

The fan is activated to circulate air inside the oven so as to defrost food in just a few minutes.

Fan-Assisted Cooking

When used together, the fan and the upper and lower heaters provide quick cooking, which is especially ideal for baking batches of food, like biscuits.

Conventional Gas Cooking

Ideal for cookies, juicy meats, and all types of pastry. The burner located below the cavity generates the heat for cooking.

Gas Grill

The burner at the top of the cavity generates the heat for cooking. Ideal for grilling steaks, fish or browning the top of food.

Safety Features

Gas Safety for Ovens

This special device senses when flames that might occur. If the flame goes out accidentally by wind or by some kind of liquid, the gas flow automatically cuts off. The gas safety feature is standard on the oven sections of the gas cookers.

Flame Failure Device for Burners

If the flame is accidentally extinguished by wind or by overflowing liquid, the flame failure device automatically cuts off the gas supply to prevent any gas leakage.

Smart Design for Ease of Use

Easy to Remove Side Racks

To make cleaning of the oven interior part easier, the side racks can be simply be detached without the need for a special tool.

Pull-out Shelf System

The extending arms of the telescopic pull-out shelf system offers easy and safe access to the cooking tray.

Catalytic Panel

The catalytic panel mounted on the back wall of the oven cavity absorbs grease and reduces odors during cooking, making it easier to clean the oven without the need for heavy-duty cleansers.

Durable Oven Door

The door hinges have a sleek yet strong and durable design. Due to the solidity of the hinges, the door can carry a load as heavy as 22.5 kg, which is over 20% more than standard oven doors. That means you can place your fully loaded trays on the door without any further concerns.

Full Size Tray

Thanks to the extra large interior, Beko oven trays are large enough to cook up to 25% more food in one go - a smart feature that makes it easier to cook large meals. In addition to its size, the 55 mm-deep tray is ideally suited for roasting or baking.

Electronic Programmer

The electronic programmer with animated display enables the user to navigate with symbols that are easy to read - even for the elderly. The display shows the selected cooking function, as well as the recommended tray level for the best cooking results.

Booster Function

The booster function activates all heaters for quick pre-heating to reach the set cooking temperature. Thanks to this feature the oven is heated 35% faster in comparison to standard cooking functions. Once the desired temperature is reached, the oven will automatically switch back to the pre-set cooking mode.

Push-in pop-out knob

Push-in pop-out knobs not only get less dirty, it is also easier to clean the panel. This smoothness in design makes your oven more elegant.

Cast Iron Pan Supports

Enhancing the stylish and professional look of your hob, cast iron pan supports provide maximum stability enabling you to use pots and pans of any size without the risk of tilting or sliding.

Wok Burner

The high-power 3600W wok burner cooks food rapidly, without letting go its nutritional value. Heat is more evenly distributed at the bottom of the pan, resulting in excellent cooking performance over a shorter period. The feature is specifically designed for the wok lovers for whom time-management and joy of eating come first.

Spacious Storage Drawer

The storage compartment underneath the oven glides out easily and provides ideal space for storing oven accessories.

CSM 69500 GXP Cooker

Pyrolytic Self Cleaning

Removing greasy stains that accumulate in the oven over time has always been a dreadful chore. Beko pyrolytic ovens save you from the trouble of scrubbing those hard-to-reach surfaces. The 120-minute pyrolytic self-cleaning cycle burns stubborn stains to fine ash as your oven heats itself to 500 °C. The ash can then be simply wiped away with a piece of cloth, without the need of any detergents or chemicals. For less dirty ovens, it is also possible to choose a shorter 90-minute eco-pyrolytic cycle which saves 25% on energy consumption.

Touch control induction hob with Pyrolytic oven

The hob of the elegantly designed oven offers you safety, efficiency and easy - cleaning as well. Innovative solutions brought to you by the latest and pioneering cooking technology is available now. Induction zones heat up only when there's a pot on the vitroceramic surface, while the rest of it gets barely warm. Inside the induction hob, there is a coil that creates a magnetic field. When the pot is placed on the induction zone, this magnetic field transfers heat directly to the cooking pan. There's no flame or glowing hot surface. The only result is a rapid increase in food temperature that can be precisely regulated. This method of heating ensures minimum energy loss and maximum speed.

Practiclean Full Glass Inner Door

Every Beko freestanding cooker is equipped with this Practiclean Full Glass Inner Door. Constructed with a full glass panel, the interior of the door is free of bolts, making it easy to clean with a single wipe.

Energy Efficiency

The need to save energy and resources has never been more important than now. Beko Pyrolytic oven which has A-10% energy performance delivers excellent cooking performance with minimum energy consumption.

Microwave ovens

Equipped with advanced functions, new range of Beko microwave ovens offer practical cooking solutions besides their elegant designs.

Microwave ovens:

Strong, durable and stainless steel interiors together with automatic programming, practical usage, convenient cleaning... With all these features, Beko microwaves are designed to help you cook delicious dishes quickly.

Efficient Solutions

Ranging from 20 to 30 litre-capacity, Beko microwave ovens offer practical cooking solutions to help you keep up with a fast-paced life. The range is well equipped with advanced functions, including Quick Start, Auto Weight Defrosting, Auto Cooking Menu and Low and Strong Grilling.

Cooking Functions

Selected models feature combined cooking functions, including convection & microwave; grill & convection; grill & microwave. Fan heating can also be used on its own for convection cooking.

Washing Machines

Distinguished by its functional design and smart features, the Beko washing machine range is designed to meet a multitude of requirements while fitting perfectly into any home and space.

Beko Color Family

Designed to suit your home with choice of colors!

Beko washing machines combine smart features and functional designs. These products stand out with their multi-color options while offering numerous smart solutions to improve your everyday life.

Be a part of a green future!

A+++ Energy Efficiency

The need to save energy and resources has never been more important than now. Beko Washing Machines protect the nature with a special emphasis on continuous R&D in order to create sustainable future. Beko with its environmental vision presents washing machines to its distinguished customers which save 10% more than A+++ energy class.

Less noise, more comfort!

Silent Tech

Feel the design superiority and the comfort of silence with Beko silent tech technology. The specially developed silent tech side wall design reduces the vibration. Together with special programme, motor and additional insulation the ultra silent washing technology can be your next choice.

Beko washing machines will bring peace to your home with 65 dBA operating noise level which is almost 7 times* quieter than regular washing machines.

*This comparison is done according to Beko WMD78120 washing machine.

Cleans more, consumes less!

AquaFusion™

Beko washing machines help you to save detergent as well as energy and water. In regular washing machines which do not have a detergent saving system (AquaFusion) nearly 20% of the detergent is lost during the washing process. Specially developed Aquafusion Technology featured in Beko washing machine reduces this amount. You save up to 5.5 kg of detergent every year.

Allergy Free cleaning approved by Allergy UK!

BabyProtect+™

It is known that 12% of all babies are allergic. The specially developed antiallergic BabyProtect+ program targets to provide antiallergic laundry for your sensitive skin and for your baby. You can get maximum hygienic cleansing results by the help of additional drum movements and sensitive temperature control. Temperature is continuously maintained at a certain level throughout the wash cycle.

Additional rinse cycle provides perfect rinsing results which is very important for you and for your baby. This program is designed for allergens which can be found in daily life that are house dust mites, dog and cat allergens, pollens, live mites, bacterias and fungus. Moreover this program is also capable of removing all sorts of hair as well. 99,9% hygienic and antiallergic BabyProtect+ program tested by Allergy UK. Perfect for babies suffering from allergy.

Technology Solutions for Laundry Care

Gentle and Effective Care

AquaWave™ Technology

Beko aquawave drum technology provides gentle yet effective washing conditions for all garments, making them last longer. This special technology is inspired by nature. Clothes like new, wash after wash. The full interior design of the washing machine is replicating the gentle and also effective power of waves.

Specially designed drum pattern gently carries the laundry away like a wave from the drum. Thus, garments move smoothly around in the drum. Paddles with wave form also contribute in gentle care of your laundry.

Expand your washing machine lifetime

Brushless Motor Technology

Beko 8 kg washing machine range features brushless motor technology.

Brushless motor offers the following advantages:

- Extended motor life
- Increased mechanical action ratio
- Better torque and speed characteristics
- Uniquely patented unbalanced load detection

Extended life up to 100 times

Hi-tech Heater

The Heating Element is an essential component of a washing machine. The new Beko heating element incorporates a state-of-the-art nickel metal surface coating technology resulting in 50% less surface roughness, ensures perfect corrosion protection, and reduces lime-scale accumulation by 40%. The Hi-tech Heater has an extended life of up to 100 times more than a standard heating element.

This means you're very unlikely to experience heating element failure in your washing machine's lifetime.

40% less lime scale piling up on the heater also means the elimination of energy and time lost due to a thick layer of lime scale build up. Well-functioning heater means more energy saving as 75% energy consumption is generally seen during the heating process.

For special care and hygiene

Fashion Care

Designed for delicate and fashionable clothing items made of materials like viscose and rayon. This program features extra gentle agitation so you can wash your clothes confidently without worry of damage.

BabyProtect

The combined intensive wash and rinse cycles on this program ensures excellent results. It's especially designed for garments that require special care, such as baby clothing or garments for the people who have allergies or sensitive skin.

Dark Care

It's time to quit worrying about dark colors in your washing machine. Beko has a special program for dark-colored synthetic or cotton-based laundry that's suitable for dark clothes or colorful garments that may fade. The program washes at low temperatures and on low spin speed with slow mechanical movements, while taking more water on the rinse cycle. The Dark Care program washes a half-capacity load at 30-40 °C. Liquid detergent or wool shampoo is recommended for dark laundry.

Handwash

This program enables you to safely wash delicate hand-wash fabrics such as silk and cashmere. It creates a particularly gentle wash action, so the agitation is minimized to avoid shrinkage.

The program also uses less water, thus preventing excess absorption by the fibres on fabric. Which can often result in clothes stretching or becoming misshapen.

Wool Program

Wool program washes delicate woollens even more gently than you can by hand. This special washing cycle with its smart control will ensure that woollen garments are washed without damage. Moreover, by adjusting the optimum water level fibres will not absorb too much and become misshapen and stretched.

Duvet Program

Dust mites love to breed in the bed, living in mattresses, pillows and duvets. The average bed can easily have over 10,000 dust mites living in it, collectively depositing over two million droppings - a primary cause of asthma and allergies.* Allergies are becoming one of the top health concerns in households. That's why Beko 8 and 9 kg washing machines feature a special wash program to take care of this problem. The program removes dust mites by thoroughly permeating right through the bedding. The extra-large 8 and 9 kg capacity drum size and special wash program will effectively and thoroughly wash even a king-sized duvet.

**Source: British Allergy Foundation report*

Self Clean Program

This special cycle provides better machine hygiene by heating the water up to 70 °C. During the Self Clean program, drum and tub receive the necessary cleaning automatically. This special cycle program cleans the tub while it is empty to ensure that residues do not accumulate in the tub after the wash.

Smart Solutions for Laundry Care

For time saving

Daily Xpress

At Beko, we know how important your time is and we do our best to provide the most efficient products possible. The Daily Xpress program has been designed to wash slightly soiled, unstained cotton garments quickly, especially items that have been used only once, like bathrobes, duvet covers, sport wear, daily clothes, etc. Full capacity laundry can be washed 30 °C in just 39 minutes. The program also allows washing in all temperatures between 0-90 °C.

Xpress Super Short

This program is suitable for slightly soiled, unstained and small amounts of laundry, such as socks, towels, bed sheets and t-shirts that have been used only once. Xpress Super Short washes a 2 kg capacity load at 0-30 °C in just 14 minutes.

Freshen Up Program

This rapid 17 minute program is useful for clothes that are not dirty, but just need freshening up or to remove unwanted odours.

Mini 30 Program

This special program is designed for lightly soiled garments that require refreshing. After a day at work or a night out, you can revive and perfume your clothes in just 30 minutes at 30 °C, thus saving considerable time and energy.

For daily needs

Mix 40

Designed to wash synthetic and cotton garments together in one wash load, this program can wash a mixed load of cotton and synthetic laundry in one go.

Shirt Program

Beko has developed a special program in order to lengthen the lives of our shirts. This special program has less mechanical movements and the temperature is set maximum at 40 °C to ensure that it minimizes the damage to your shirts and they last much longer than they usually would.

Sports Program

Beko developed the sports program for those who love sports and training. This program washes at 40 °C, and is particularly recommended for lightly soiled synthetic/cotton blended gym clothes.

Eco Clean 20 °C Program

An ecological program which saves up to 80% energy comparing with cotton 40 °C program. This super efficient program washes a maximum of 3.5 kg lightly soiled laundry, by using suitable detergents which perform well at 20 °C wash temperatures saving time and money.

Smart Solutions for Laundry Care

Other Options

Prewash

Beko offers a wide range of programs which can be used for every need. While your laundry are heavily soiled Beko pre-wash option can be used in conjunction with the washing programs to get more satisfactory results.

Express

With the help of the Express option the wash time can be reduced by 30% to 50% depending on the program and fabric type. This option can be used on all cotton and synthetic programs.

Rinse Plus

Some clothes require more care than the others. Extra rinsing is provided for garments that require special attention, i.e. baby clothing or garments worn by people that are allergic to detergents. This function will protect sensitive skins by washing off any leftover detergent.

Easy Ironing

The spin cycle is divided into several spin stages and drum movements that leave the laundry lying loosely in the drum. This special action protects the laundry from creasing and makes ironing simpler and less time consuming.

For pet lovers

Pet Hair Removal Function

Beko has developed a smart solution for pet lovers with a function that removes pet hair on laundry during the wash cycle. When this function is selected, your machine adds pre-wash and additional rinsing steps to the normal cycle.

Thanks to this smart solution by Beko, pet hair is removed from your laundry in an effective way, solving one of the main problems of all pet lovers.

Smart Solutions for Laundry Care

Ease of Use

LCD Display

The LCD display on Beko washing machines gives you all the information you need on your wash program, including:

- Selected temperature
- Selected spin speed
- Selected options
- The current stage which the wash cycle is in (i.e. pre-wash, main-wash, rinsing, softener or spinning)
- Whether the child lock option is activated
- The time remaining until the end of the wash
- Economy setting, to let you know whether your program selection is an economic one in terms of energy consumption. With its simple and easy-to-use navigation buttons, you can easily customize your wash program by adjusting the temperature and spin speed, and also delay the start of the program up to 24 hours with precise intervals of as little as 30 minutes.

Extra Large Door

Selected Beko washing machines feature an extra-large 34 cm porthole. Even the bulkiest laundry - duvets, sheets, bathrobes - can be easily loaded through the extra large porthole.

Liquid Detergent Compartment

This special compartment is designed for alternative detergent usage, compatible with liquid and concentrated liquid detergents and gives opportunity to use liquid detergent with time delay option.

Capacity

Maximum Capacity in Minimum Space

Beko has developed a number of models to meet your specific needs, solving both space and energy consumption solutions. Many households are caught in the dilemma of having limited space despite their necessity for a large capacity washing machine so as to be able to wash duvet covers and big laundry loads. That's why Beko has developed a range of washing machines that offer maximum capacity in minimum space. In Beko washing machine range, a machine with just 45 cm depth can wash a 6 kg load of laundry; a machine with 50 cm depth can wash 7 kg load; a machine with 54 cm depth can wash 8 kg load; and a machine with standard 60 cm depth can wash 9 kg load of laundry.

9 kg Washing Capacity in Standard Dimension

Thanks to the 48 cm wide large drum diameter, you can wash 4 double bed linen set or 12 towels in one wash cycle. That's why it's ideal for large families who frequently wash large loads and bulky items. Moreover, it has an extremely popular Daily Xpress Program; it will handle the washing of 9 kg load in just 39 minutes. You'll end up saving even more time and energy.

Smart Solutions for Laundry Care

Performance & Safety

Automatic Water Control System

The wash load can vary in size and type of fabric. Thanks to the automatic water control system, the amount of water is automatically adjusted to give optimum performance depending on the size and type of fabric being washed. Every drop saved means less energy spent on heating. The reduced consumption of water and energy not only help to protect the environment, but also the family budget.

Electronic Unbalanced Load Control

This system ensures that laundry is properly distributed around the drum, eliminating the vibration and noise created by imbalance, and providing absolute stability during spinning. In the event of improperly distributed loads, the machine automatically adjusts the spin speed for optimum spinning efficiency.

Auto-Restart

Beko developed special auto-restart feature allows the washing machine to continue the program in safe conditions after the electricity cut-offs that gives comfort in some areas where electricity network has problems.

Child Lock

The child lock option can be activated to prevent little fingers from tampering with the buttons. Activating the child lock option prevents any change made to the selected program.

Overflow Safety

The water level sensor measures any variation from the correct water level in the drum and automatically starts draining when this level is exceeded.

WMB 91243 LC Washing Machine

Energy Efficiency

Thinking of your laundry and the world, the Beko XL9 washing machine has A+++ energy performance.

9 kg Washing Capacity

Thanks to the 48 cm wide large drum diameter, you can wash 4 double bed linen set or 12 towels in one wash cycle. That's why it's ideal for large families who frequently wash large loads and bulky items. Moreover, it has an extremely popular Daily Xpress programme; it'll do the full 9 kg load wash in just 39 minutes. You'll end up saving even more time and energy.

AquaWave™ Technology

Beko aquawave drum technology provides gentle yet effective washing conditions for all garments, making them last longer. This special technology is inspired by nature. Clothes like new, wash after wash. The full interior design of the washing machine is replicating the gentle and also effective power of waves.

Specially designed drum pattern gently carries the laundry away like a wave from the drum. Thus, garments move smoothly around in the drum. Paddles with wave form also contribute in gentle care of your laundry.

Aquafusion

Smart Beko washing machines help you to save detergent as well as energy and water. In regular washing machines which do not have a detergent saving system, nearly 25% of the detergent is lost during the washing process. Specially developed Aquafusion Technology featured in Beko washing machine reduces this amount to a very low level. This saves you up to 5.5 kgs of detergent every year.

Liquid Detergent Compartment

This special compartment is designed for alternative detergent usage, compatible with liquid and concentrated liquid detergents and gives opportunity to use liquid detergent with time delay option.

XL door

Selected Beko washing machines feature an extra-large 34 cm porthole. Even the bulkiest laundry - duvets, sheets, bathrobes - can be easily loaded through the extra large porthole.

Programs

16 programs including: Daily Xpress, Xpress super short, BabyProtect, Freshen up, Self Clean, Hand wash, Woolen, Dark Care, Eco Clean 20, Duvet.

Cleans more, consumes less with Beko XL9 smart washing machine

WMB 81244 LA Washing Machine

Energy Efficiency

Beko enhances its green credentials by producing one of the most energy saving washing machines in the market; it consumes 10% less energy than A+++ energy class level. This is approximately half the energy of an average washing machine in our homes we currently use. Global warming is a global threat that affects us all. Extreme weather, increased temperatures and melting glaciers are just a few of its symptoms. Keeping this environmental factor in mind, Beko produces a range for its washing machines from A+ to A+++ -10% energy consumption.

AquaWave™ Technology

Beko aquawave drum technology provides gentle yet effective washing conditions for all garments, making them last longer. This special technology is inspired by nature. Clothes like new, wash after wash. The full interior design of the washing machine is replicating the gentle and also effective power of waves.

Specially designed drum pattern gently carries the laundry away like a wave from the drum. Thus, garments move smoothly around in the drum. Paddles with wave form also contribute in gentle care of your laundry.

Programs

16 programs including: Daily Xpress, Xpress super short, BabyProtect, Freshen up, Self Clean, Hand wash, Woolen, Dark Care, Eco clean 20, Sports, Duvet.

Specifications

- Brushless Motor
- 1200 rpm Spin Speed
- LCD Display
- Time delay up to 24 hr
- Remaining time indicator
- Program follower
- Temperature selection
- Spin speed selection
- 60 cm depth
- White
- XL Silver Door

Performance & Safety

- Energy Efficiency Class: A+++
- Spin Drying Efficiency Class: B
- Annual energy consumption: 171 kWh
- Annual water consumption: 11.440 liters
- Automatic water control system
- Child lock
- Overflow safety

Be a part of a green future
with Beko washing machines!

- Aquawave Technology
- Prewash Express Easy Ironing

Programs

16 programs including; Daily Xpress, Xpress super short, BabyProtect, Freshen up, Self Clean, Hand wash, Woolen, Dark Care, Eco clean 20, Sports

Specifications

- 1400 rpm Spin Speed
- LCD display
- Time delay up to 24 hr
- Remaining time indicator
- Program follower
- Temperature selection
- Spin speed selection
- 54 cm depth
- White
- Extra Large Silver Door

Performance & Safety

- Energy Efficiency Class: A++
- Spin Drying Efficiency Class: B
- Annual energy consumption: 194 kWh
- Annual water consumption: 9.020 liters
- Automatic water control system
- Child lock
- Overflow safety

Programs

16 programs including; Daily Xpress, Xpress super short, BabyProtect+, Freshen up, Self Clean, Hand wash, Woolen, Dark Care, Eco clean 20, Sports

Specifications

- 1200 rpm Spin Speed
- LCD display
- Time delay up to 24 hr
- Remaining time indicator
- Program follower
- Temperature selection
- Spin speed selection
- 54 cm depth
- White
- Extra Large Silver Door

Performance & Safety

- Energy Efficiency Class: A++
- Spin Drying Efficiency Class: B
- Annual energy consumption: 194 kWh
- Annual water consumption: 9.020 liters
- Automatic water control system

Tumble Dryers

Beko Tumble Dryers are the ideal partner for your washing machine.

Simple and easy to operate, Beko tumble dryers have all the features to save you time and money. They are designed to complement Beko washing machines and are available with optional stacking kits. Whether located in kitchen or utility room, there is model to partner your washing machine.

Beko Color Family

Designed to suit your home with choice of colors!

Beko tumble dryers combine smart features with functional and elegant design. These products are distinguished by their colorful appearance while offering multiple smart solutions to improve your everyday life.

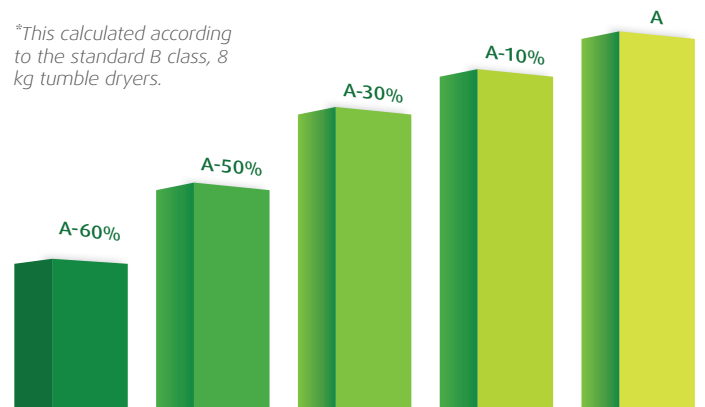

Changing the rules of the game!

A -60% Energy Efficiency

Tumble dryers used to be considered as the most energy consuming products among all household appliances. Well, not anymore! Beko has now brought a new approach and made a huge difference with its new heat pump tumble dryer range. Products ranging from A-10% energy consumption to A-60% energy consumption, Beko offers a large spectrum of cost-effective & energy-saving solutions. With the selection of these models, it is now possible to save 65% energy when compared to regular tumble dryers.*

**This calculated according to the standard B class, 8 kg tumble dryers.*

Innovative solutions for minimum consumption!

Dry & Save (Heat pump) Technology

Beko's innovative tumble dryer is a combination of a condensing dryer and an air conditioner.

The evaporator in the system does the work of the condenser, drying the saturated air.

The condenser heats the air that dries the laundry.

The closed loop system is energy efficient in drying laundry and condenses the water out of the garments.

By means of this energy efficient heat exchange system, the air temperature inside the drum is considerably lower compared to conventional dryers and more importantly, consumes minimum amounts of energy.

Better sealed for high efficiency!

High Condensation Efficiency

With specially sealed design more condensation and less hot air escape is achieved. The formation of the humidity within environment will also be minimized by this special technology.

Flexy sensors, precise dryness!

FlexySense / Automatic Sensor Drying

Beko sensor-controlled dryers provide easy use with advanced moisture and temperature sensors. The FlexySense sensors save you from the time estimation for drying by allowing you to choose the desired dryness level.

The dryer stops automatically when it detects the requested dryness level that has been achieved.

The moisture sensor also makes sure that the laundry is evenly dried. Additionally, the FlexySense sensor stands out by its superior quality in comparison to the other sensors.

For example, in the iron dry program, you can get the same precise dryness level in each cycle, regardless of the drying load and the water hardness level.

Smart Solutions for Laundry Care

For Time Saving

Daily Program

Beko know your time is precious and the importance of quick results when you are in a hurry. We do our best to provide the most efficient and user friendly products possible. As a result of this philosophy, Beko have developed a Daily program to dry 4 kg of laundry in just 1 hour. Used in conjunction with a Beko washing machine with a Daily program, you can wash and dry your clothes in less than 2 hours.

Xpress 35'

With this program 2 kg laundry (8 shirts) can be dried in just 35 minutes. This program is designed to deliver the speed you need in such emergencies with Beko's Super Short 14 minute Xpress program, available on selected Beko washing machines, your laundry can be ready in about 49 minutes.

Mixed Program

This program is designed to dry synthetic and cotton garments together in one load, eliminating the need to separate garments into different loads according to fabric type. This new program on Beko dryers thus enables you to uninterruptedly continue drying the laundry washed in the mixed program of the washing machine.

Freshen up

The freshen-up program allows you to get rid of unwanted odors in your laundry with a gentle drum action ensures that your laundry is freshened-up without having to be washed.

For Intensive Care

BabyProtect

With this program, Beko enables you to dry the clothes of your precious little one at the correct temperature by carefully controlling the inside climate thanks to temperature and humidity sensors.

Special care for Delicates

The sensor-controlled Beko tumble dryers feature a special care program for your delicate laundry, ensuring that they'll be dried gently at very low temperature.

Wool Refresh

This program gives the laundry back their bounce by fluffing up the fibres in woollen garments.

Drying Rack Program

With this special program Beko relieves your worries about damaging your delicate garments. This program is designed to dry items which are not suitable to tumble in the drum and is recommended for sports shoes, woollens and cuddly soft toys as the rack does not rotate.

For Daily Needs

Sports Program

Beko takes care of those who take care of themselves. This program dries laundry at an optimized humidity level that is perfectly adjusted for sports clothing.

Shirts Program

Drying shirts in a normal drying cycle can damage the shirt and cause loss of brightness in whites over time. The shirt program in Beko tumble dryers has been specifically designed to offer solutions for these problems, offering a gentle program that dries shirts at low temperatures and minimizes any possible damage to whites. The program assures that your shirts last much longer than they usually would.

Jeans Program

Thicker fabrics are difficult to dry in normal drying cycles - especially along the seams where the fabric is much thicker than on the rest of the item. As a solution, Beko developed a special 'jeans' program for thicker fabrics, ideal for drying the seams of clothes like as jeans and fleece. This program thus provides perfect and homogenous drying for your clothes.

Time Management & Ease of Use

LCD Display

The LCD display on Beko dryers gives you all the information you need, including:

- Water tank full
- Remaining time
- Time delay
- Condenser cleaning
- Door open
- Child lock is active
- Program follower
- Adjustment of drying degree

With its simple and easy-to-use navigation buttons, you can easily adjust the drying level, activate buzzer and anti-creasing options, and set the time you want to start your machine.

Large Door

The 40x32 cm large door opening on Beko tumble dryers provides easy loading and unloading of even the most bulky laundry, including bathrobes and sheets.

Adjustable Program End Indicator

A buzzer indicates the end of the cycle in order to inform you that the program is finished and you may take out your laundry. You can adjust the sound level of the buzzer or deactivate it as you wish.

Interior Drum Light

Beko interior drum light lets you see everything inside for easy loading and unloading.

Smart Solutions for Laundry Care

Space Saving

9 kg Drying Capacity in Standard Dimension

Beko 9 kg drying machine is ideal for large families as it eliminates the need to split up big loads due to space constraints. Thanks to the Daily Program, used in conjunction with a Beko washing machine with a Daily program, you can wash and dry your clothes in less than 2 hours which is ideal for people with busy lifestyles.

Universal Stacking Kit

The Beko laundry stacking kit is a smart space saving solution. In a 60 cm foot print, you can stack a 60 cm deep Beko washing machine and a 60 cm deep tumble dryer. Thanks to its flexible design, you can even use it to stack a 60 cm deep tumble dryer on top of a 45 cm deep washing machine.

Perfect Couple

Smart solutions from Beko help you preserve the integrity of your bathroom. With its LCD control panels and elegant design Beko washing machine and Beko drying machine will be the great duo in your bathroom.

Ease of Use and Safety

Easy Use Filter

Beko tumble dryers feature user-friendly filters that are easily accessed and cleaned, thus guaranteeing excellent drying performance.

Easy to Reach Condenser Unit for Cleaning

Beko's latest condenser unit is the easiest to reach and pull out as well as to clean for achieving the best possible performance.

Auto Anti-Creasing

In Beko dryers, the anti-crease function automatically follows the drying cycle. This function provides ready-to-go laundry, since the gentle drum action separates the laundry and ensures that it remains crease-free.

Reverse Drum Action

All Beko tumble dryers operate with a reverse drum action, which provides homogeneous drying and prevents creasing of your laundry.

Larger Drum and Paddle

Beko's latest range of tumble dryers have larger drums compared with previous models, designed to tackle bigger loads up to 9 kg of laundry and still fits standard depth - as well as stacking on top of suitable Beko washing machines. The drum paddle design minimizes tangling of laundry helping you achieve minimum amount of creasing.

Safety

Child Lock

The child lock option can be activated to prevent little fingers from playing around with the buttons and knobs. Activating the child lock option prevents any change made on the selected program.

Accessories

Drying Rack

The drying rack is designed for drying textiles and delicate laundry which should not be tumbled such as wool garments, sports shoes, soft toys and more. It fits simply inside the dryer to provide fast and gentle drying.

DCU 8332 XRC & WMB 81244 KRC

DPU 8390 X Tumble Dryer

A-60%

Energy Efficiency

Until now tumble dryers have been known as the most energy consuming products among all household appliances. Beko has now changed this with its new heat pump tumble dryer range. The energy consumption of new Beko heat-pump tumble dryers achieve 60% lower energy consumption compared to even A class models.

Dry&Save (Heat-pump) Technology

Beko's innovative tumble dryer is a combination of a condensing drier and an air conditioner. The evaporator in the system does the work of the condenser, drying the saturated air. The condenser is used to heat the air that dries the laundry. The closed loop system is a very energy efficient way to dry laundry and condenses the water out of the garments. By means of this energy efficient heat Exchange system, the air temperature inside the drum is considerably lower compared to conventional dryers and more importantly consumes minimum amounts of energy.

FlexySense - Automatic sensor drying

Beko sensor-controlled dryers provide easy use with advanced moisture and temperature sensors. The FlexySense sensors save you from drying time estimation by allowing you to choose the desired dryness level. The dryer stops automatically when it detects that the requested dryness level has been achieved. The moisture sensor also makes sure that the laundry is evenly dried. The FlexySense sensor is distinguished by its superior quality in comparison to the other sensors. For example, in the iron dry program, it can achieve the same precise dryness level in each cycle, regardless of the drying load and the water hardness level.

8 kg load capacity

8 kg dryers allow you to dry loads less often making your life easier by saving you time as well as water and energy.

Large door

The 40 cm large door opening on Beko tumble dryers provide easy loading and unloading of even the most bulky laundry, including bathrobes and sheets.

From Beko “Sponsor of basketball” to the entire world with pride...

Beko is a global brand who believes in the importance of sports in people’s lives. For this reason Beko supports all sporting events, mainly basketball. Beko’s “dynamic, entertaining and young” character is inline with the nature of basketball. Beko also believes that sports play a major role in the growth of young generations. Basketball is a sports that leads to the development of communication and social skills such as teamwork, quick thinking and self esteem.

Basketball represents the same values and targets that Beko possesses, competing in a fair setting with ever-growing ambition to be the leader. Beko commenced its basketball adventure in 2006 by becoming the title sponsor of the Turkish Basketball League. The league has been running under the name of “Beko Basketball League” for 6 years. It has also become the name sponsor of Basketball Bundesliga, one of the most significant basketball leagues, for six years since 2009/2010 season. As a competitive league, Beko Basketball Bundesliga has always had a good reputation in the international arena. In 2011 Beko carried its international league sponsorships one step further and became the sponsor of Russian Basketball League as well. The league has started to be named as “Beko Professional Basketball League” in 2011, Beko has become the name sponsor of Lithuania Basketball League, LKL. Lithuania is known with their love in basketball and LKL is one of the most succesfull Leagues of Europe as well.

Beko aside from the league sponsorships, gave great support to international championships as well starting with main sponsorships for “2009 FIBA Asian Basketball Championships” organized in China and “Eurobasket 2009” organized in Poland. Beko challenged itself and became the “Presenting Sponsor” of 2010 World Basketball Championship, which shall be held every four years, bringing the strongest teams together.

Beko was also the presenting sponsor of the European Basketball Championships 2011 held in Lithuania.
